

ASHIK SHIHAB

Product Designer | UI/UX Designer

Phone: +91 95625 39257 | Email: ashikshihab101@gmail.com | Portfolio: ashikshihab.github.io | [LinkedIn](#)

Product designer with 4 years in B2B SaaS. I take complex, data-heavy software and make it usable for the non-technical people who run the business, and I settle design debates with behavioural data rather than opinion. At Turbolab I own end-to-end design for MetricsCart and ScrapeHero (14,000+ customers, including Fortune 50 companies), designed Intell's search-and-filter systems, built the design system across all three, and lead a small design team.

SKILLS

Design: Product Thinking · Product Strategy · UX Strategy · Information Architecture · Interaction Design · Dashboard Design · Data Tables · Filtering & Query Systems · Data Visualisation · Mobile App Design · Responsive Design · Prototyping · Wireframing · Design Systems · Accessibility · AI-Assisted Design

Research & Data: Journey Mapping · Usability Testing · Session Recording Analysis · User Analytics · Stakeholder Interviews · Competitive & Market Research · Hypothesis-Driven Design · Data-Informed Decision Making · Conversion Optimization

Tools and Build: Figma · Notion · Claude Code · HTML · CSS · JavaScript · WordPress · Elementor · WooCommerce

EXPERIENCE

UI/UX Designer - Product | Turbolab Technologies · Kochi, Kerala, India

Jul 2023 - Present

MetricsCart (*Digital Shelf Analytics SaaS*)

- Own end-to-end design of an analytics platform used by ops teams to track 200+ SKUs across retailers.
- Designed a multi-select filtering system (plain-language operators, tag chips) that replaced dropdowns failing at quick-commerce scale, so non-technical analysts could build complex queries themselves.
- Replaced a proposed 20-to-30-column monitoring table with a focused, expandable sub-row layout, winning stakeholder sign-off after showing both options side by side.
- Turned a vague requirements doc into shippable filtering, dashboard, and drill-down workflows.

ScrapeHero (*Data-as-a-Service ecosystem*)

- Led the first unified UX across 3 surfaces for a company serving 14,000+ customers, including Fortune 50s.
- Redesigning Data Store discovery and checkout: industry-standard filters, dataset metadata (freshness, coverage) on listing cards, and product pages that lead with historical data.
- Reworked Cloud's marketplace and subscription flow with clearer categorisation, better filters, and an easy-to-find Plan Upgrade that had been buried, lifting conversion about 15% and cutting drop-off about 10% (confirmed with session recordings and analytics).
- Rebuilt scrapehero.com's navigation, where key products were missing and users kept looping, and settled a five-way stakeholder split on direction using session recordings and behavioural data, not opinion.

Intell (*News-Intelligence Platform*)

- Designed the advanced search-and-filter system that lets non-technical researchers build precise, multi-condition searches (people, organisations, publications, sentiment) without touching boolean logic.
- Built two paths for two audiences: plain-language filters (include, exclude, exists, does not exist) for most users and a full AND/OR query builder for power users, with applied filters collapsing into removable chips.
- Added saved searches and automated alerts, reducing the need to recreate recurring queries and improving workflow.

Design Systems, Team & AI-Assisted Workflow

- Built and maintain Turbolab's first shared design system (design tokens, data-table and filter-bar components, page templates), used across all products.
- Lead a 5-person team (one direct-report designer plus four graphics and motion designers), running design QA and reviewing design-system contributions.
- Brought Claude and Custom GPTs into the team's workflow for graphics, copy, and competitive audits, cutting turnaround time on routine tasks.

Marketing Sites & Build

- Restructured the MetricsCart marketing site from feature-led to solution-led. Primary CTA clicks grew about 16x (from roughly 500 to 8,000 a month) and it brought in around 12 qualified demo requests a month.
- Built and shipped the MetricsCart and ScrapeHero marketing sites end-to-end.

Visual Designer | Turbolab Technologies · Kochi, Kerala, India

Aug 2022 - Jul 2023

- Built the visual foundation, brand identity, and first reusable UI patterns that became the base of the design system, working with product and marketing on consistent hierarchy across web and product screens.

PROJECT

Slotbox | Solo end-to-end product design

- A two-sided concept platform: independent urban-Indian venues (gyms, restaurants, supermarkets) run their own screen promos for free, then rent out ad slots they approve, through a phone-first owner app and an analytics-first advertiser dashboard.
- Reframed the pitch from "sell ad space" to "give owners control" after finding venues resist ads to protect their walls, not to avoid money, so the product leads with a free self-serve tool and keeps ad revenue opt-in on the owner's terms.
- Designed the two surfaces to opposite needs (owner app usable one-handed between customers; advertiser side a proof-of-play analytics dashboard) and chose flat weekly pricing over CPM, trading precision for much lower friction for small local buyers.

Freelance UI/UX Designer | During university

Feb 2019 – Jul 2022

- Designed a web app for wedding photographers to organise shoots and collaborate with clients on deliverables.
- Designed end-to-end UI/UX for 2 e-commerce websites.
- Delivered branding for multiple international clients.

EDUCATION

B.Tech, Electronics and Communication Engineering

Aug 2018 - Jul 2022

A. P. J. Abdul Kalam Technological University
