

ASHIK SHIHAB

Product Designer | UI/UX Designer

Phone: +91 95625 39257 | Email: ashikshihab101@gmail.com | Portfolio: ashikshihab.github.io | [LinkedIn](#)

Product designer with 4 years in B2B SaaS. I take complex, data-heavy software and make it usable for the non-technical people who run the business, and I settle design debates with behavioural data rather than opinion. At Turbolab I own end-to-end design for MetricsCart and ScrapeHero (14,000+ customers, including Fortune 50 companies), built the design system across every surface, and lead a small design team.

SKILLS

Design: Product Thinking · Product Strategy · UX Strategy · Information Architecture · Interaction Design · Dashboard Design · Data Tables · Filtering & Query Systems · Data Visualisation · Mobile App Design · Responsive Design · Prototyping · Wireframing · Design Systems · Accessibility · AI-Assisted Design

Research & Data: Journey Mapping · Usability Testing · Session Recording Analysis · User Analytics · Stakeholder Interviews · Competitive & Market Research · Hypothesis-Driven Design · Data-Informed Decision Making · Conversion Optimization

Tools and Build: Figma · Notion · Claude Code · HTML · CSS · JavaScript · WordPress · Elementor · WooCommerce

EXPERIENCE

UI/UX Designer - Product | Turbolab Technologies · Kochi, Kerala, India

Jul 2023 - Present

MetricsCart (*Digital Shelf Analytics SaaS*)

- Own end-to-end design of an analytics platform ops teams use to track 200+ SKUs across retailers.
- Designed a multi-select filtering system with plain-language operators and tag chips, replacing dropdowns that broke at quick-commerce scale, so non-technical analysts could build complex queries themselves.
- Replaced a proposed 20-to-30-column monitoring table with a focused, expandable sub-row layout, winning stakeholder sign-off by showing both options side by side.
- Turned a vague requirements doc into shippable filtering, dashboard, and drill-down workflows.

ScrapeHero (*Data-as-a-Service ecosystem*)

- Led the first unified UX across 3 surfaces for a company serving 14,000+ customers, including Fortune 50s.
- Redesigned Data Store discovery and checkout with industry-standard filters, dataset metadata (freshness, coverage) on listing cards, and product pages that lead with historical data.
- Reworked Cloud's marketplace and subscription flow with clearer categorisation and a Plan Upgrade path that had been buried, lifting conversion about 15% and cutting drop-off about 10% (confirmed with session recordings and analytics).
- Rebuilt scrapehero.com navigation where key products were missing, and users kept looping, settling a five-way stakeholder split with behavioural data, not opinion.

Intell (*News-Intelligence Platform*)

- Designed a search-and-filter system that lets non-technical researchers build multi-condition searches (people, organisations, publications, sentiment) without touching boolean logic, with a plain-language path for most users and a full AND/OR builder for power users.
- Added saved searches and automated alerts, cutting repeated recreation of recurring queries.

Design system and AI workflow

- Built and maintain Turbolab's first shared design system: design tokens, data-table and filter-bar components, and page templates used across every product.
- Brought Claude and custom GPTs into the team's workflow for graphics, copy, and competitive audits, cutting turnaround on routine tasks.

Visual Designer | Turbolab Technologies · Kochi, Kerala, India

Aug 2022 - Jul 2023

- Built and shipped the MetricsCart and ScrapeHero marketing sites end-to-end.
- Restructured the MetricsCart marketing site from feature-led to solution-led. Primary CTA clicks grew about 16x (roughly 500 to 8,000 a month), bringing in around 12 qualified demo requests a month.
- Built the visual foundation, brand identity, and first reusable UI patterns that became the base of the design system, aligning hierarchy across web and product screens with product and marketing.

Freelance UI/UX Designer | During university

Feb 2019 – Jul 2022

- Designed a web app for wedding photographers to organise shoots and collaborate with clients on deliverables.
- Designed end-to-end UI/UX for 2 e-commerce websites.
- Delivered branding for multiple international clients.

PROJECT

Slotbox | Solo end-to-end product design

- A two-sided concept platform: independent urban-Indian venues (gyms, restaurants, supermarkets) run their own screen promos for free, then rent out ad slots they approve, through a phone-first owner app and an analytics-first advertiser dashboard.
- Reframed the pitch from "sell ad space" to "give owners control" after finding venues resist ads to protect their walls, not to avoid money, so the product leads with a free self-serve tool and keeps ad revenue opt-in on the owner's terms.
- Designed the two surfaces to opposite needs (owner app usable one-handed between customers; advertiser side a proof-of-play analytics dashboard) and chose flat weekly pricing over CPM, trading precision for much lower friction for small local buyers.

EDUCATION

B.Tech, Electronics and Communication Engineering

Aug 2018 - Jul 2022

A. P. J. Abdul Kalam Technological University
